Please Leave XM on the air it is truly a benifit to us all. Even though I do not live in a city that currently has travel and weather service when i do travel to those areas I know easlily where to look for the service without the obnoxious noise of convential radio. If free enterprise works then these off air radio stations will adapt and provide a better service to us the private individual. I pay for the XM service and belive I should be able to continue receive it as a part of my subscription service.  
Thanks for your time

Terry Greene
